

The construction industry is an industry with massive greenhouse gas emissions, and concrete alone has the challenge to reduce about 7% of CO₂ emissions globally.

1,0 mill Tons surplus wood is thrown away in Norway every year
 1,8 mill Of CO₂ emissions from burning this wood
 5,0 mill M³ concrete used in Norway a year
 7% Global CO₂ emissions form concrete worldwide.

For every kilo of carbon we sequester in the concrete we save the atmosphere for 3,67 kg of CO₂
